

Claims:

1-23. (Canceled)

24. (Newly Presented) A method of wrapping and electrically connecting a light string so as to provide electrical power to the light string from an electrical outlet, said light string including an elongated electrical cord presenting a male connection end and an opposed female connection end, with a plurality of lights along the length of the cord and operatively coupled thereto, said method comprising the steps of:

selecting a location for placement of said string of lights selected from the group consisting of a Christmas tree, a door frame, the outside of a house, and a group of trees;

wrapping said string of lights at said location and, in so doing, reverse wrapping the light string by beginning said wrapping from the male connector end thereof and moving towards said outlet, such that said female connection end thereof is left in relatively close proximity to said outlet and said opposed male end is relatively remote from said outlet; and

electrically coupling said string of lights while the string remains in said reverse wrapped orientation without the necessity of removing the light string and rewinding it at said location, including the steps of –

providing an elongated electrical connection assembly having male electrical plugs at both ends thereof;

taking said assembly and moving one male electrical plug thereof to a location adjacent said female connection end;

inserting said one male electrical plug into said adjacent female connector;
taking the other male connection plug of said assembly to a point adjacent said
outlet; and
inserting said other male connection plug into said outlet,
said steps of taking and inserting said male connection ends into said
female connector end and said outlet being carried out while said
string remains in said reverse wrapped orientation.

25. (Newly Presented) The method of claim 24, said connection assembly comprising a first extension cord having a male electrical plug at one end thereof and a female electrical receptacle at the other end thereof, and a second extension cord having male electrical plugs at both ends thereof, the method of including the steps of inserting one of the male electrical plugs of said second extension cord into the female receptacle of said first extension cord such that both ends of the connection assembly present male electrical plugs.

26. (Newly Presented) The method of claim 24, the male electrical plugs of said connection assembly each being two-prong plugs.
